

Development of approximately 300 hectares of irrigation land including facilities and infrastructure associated with a project of this nature. Ensuring that the design and technical planning of the infrastructure is technically sound, yet innovative and able to ensure long-term sustainable production.

Works included a new irrigation pump station, power supply, irrigation infrastructure (pivots, draglines, micro irrigation), roads, houses and administrative buildings, bulk electrical services and low voltage electrical reticulation.

ETUNDA IRRIGATION

Phase 7 & 8

PROJECT STATS

- Value** NAD 115 million
USD 7.08 million (ROE 16.24)
- Location** Etunda, Omusati Region, Namibia
- Client** Namibia Development Corporation
- Start** 04/2010
- Finish** 04/2018

SERVICES

- Concept proposal
- Construction/site supervision & contract administration
- Preliminary & detail design
- Drawings & specifications
- Project management
- Reporting
- Tender documentation, evaluation & adjudication

- Topographic survey
- Visual assessment
- Soil analysis
- Crop selection report

- Project Management
- Civil
- Structural
- Mechanical
- Electrical
